

Wash it CLEAN. Store it DRY.

Recently published guidelines* for Dental Professionals, advise that patients should 'regularly clean their dentures with warm water, mild soap and a soft bristled brush, twice a day, to remove food particles and plaque'.

Those guidelines also recommend advising patients to 'store their dentures in a dry environment overnight after cleaning them. Allowing the cleaned denture to dry out at night is more effective for reducing yeast colonisation and plaque accumulation, compared with both denture cleansers and water'.

We couldn't agree more.

Dr Mark's HyGenie® & DentalFresh are world firsts. It's an all-in-one system designed and manufactured for one purpose: cleaning, storing and protecting all types of removable dental appliances.

You've done your job by fitting your patient with a perfect dental appliance. Finish the job by including or recommending Dr Mark's HyGenie. Easy to explain and quick to demonstrate, Dr Mark's helps ensure your patient's dental appliance is well cared for at home and, ultimately, does what you intended it to do.
